

 Australian Veterinary Stem Cells Pty Ltd ('AVSC') have recently carried out clinical trials in regard to:-

**A) Dogs** - the use of AVSC stem cell technology to treat arthritis, DJD and dermatitis in the canine population (dogs)

**B) Horses** - the use of AVSC stem cell technology to treat arthritis and DJD - as well as tendon and ligament injuries in the equine population (horses).

The trials have been extremely successful with very successful outcomes that are either better or in line with the results of similar studies carried out by Vet-Stem Inc in the USA. **The vast majority of animals treated have shown very significant improvements in the conditions being treated.**
