

The results of initial treatments on approximately 7000 animals (internationally) have been extremely positive.

◆

In regard to canine (dogs) arthritis, over 80% of owners of dogs treated for arthritis with pure cultured stem cells have reported a substantial improvement in the condition (quality of life) of their dog with an average improvement grading of 75%.

◆

Approximately 80% of owners of dogs treated for arthritis with the more common simpler stem cell mixture (Stromal Vascular Fraction- SVF) reported an improvement in the quality of life of their dogs.

Nevertheless, not all pets will necessarily respond to AVSC cell therapy. Pet owners should discuss appropriateness of treatment for their pet including potential complications of surgery, potential outcomes, a comprehensive treatment plan and associated costs with their veterinarian prior to treatment.
