

Abbey, our 12 year old Golden Retriever had suffered from poly-arthritis for years. We had managed her pain for 4-5 years by using various alternative medications, Chinese herbs, supplements, acupuncture and traditional drugs. Her coat deteriorated, her muscles atrophied and she had a lot of swelling and pain in her joints. Many times we had to carry Abbey or put her in a wagon to pull her around. A couple weeks after her stem cell therapy she was chasing bunnies and squirrels and her coat grew back doubly-full! We had our dog back after 4-5 years of constant pain management. Abbey is no longer on half the medications she was prior to the stem cell therapy. Thanks for giving me a front row seat to a miracle.
