

<p style="text-align: center;"></p> <p>Strike is a 7 year old English Pointer ♦ and also an active hunting dog. He has been incredibly graceful from birth, and never had any problems. However, this summer he started to limp ♦ and under a scope we discovered he had a torn ligament in his right front shoulder.

 Given the lack of success with surgery to repair this, and that Dr. Marcus had recently done Vet-Stem Cell Therapy so successfully on Buck, we decided to do the same with Strike in July. He has also done very well on the program, and during the 3 week hunting trip, he performed as well as ever ♦ and never showed a limp. We are so happy that he seems fully recovered!
