

When only 2 years old, my most promising go-to dog for cattle and sheep herding tore his right hind tendon. After researching with my veterinarian my options, I knew Vet-Stem's regenerative stem cell therapy was the answer to Buzz's recovery.

Buzz is now completely healed, and is as good as new. He works sheep and cattle daily on our ranch, and will be competing in dog trials again this summer. Without Vet-Stem's treatment, there is no way Buzz could work daily without being in pain or discomfort. I cannot thank Vet-Stem enough for giving Buzz the ability to follow his naturally talented instinct.
