

Mister Nicadual suffered a bow on his left front super digital flexor tendon in November 2005. It was stretched and torn and he was unable to work, only hand walk. He was treated with Vet-Stem Regenerative cells and the tendon showed remarkable healing. Five months later he was back in top reining competitions. Thanks to Vet-Stem, his tendon healed completely, and within just ten months of his injury we won team gold and individual silver at the FEI World Equestrian Games!
